Aberdeen Standard SICAV I - Asia Pacific Multi Asset Fund

Important information

Risk factors you should consider before investing:

- The value of shares and the income from them can go down as well as up and you may get back less than the amount invested.
- Investing globally can bring additional returns and diversify risk. However, currency exchange rate fluctuations may have a positive or negative impact on the value of your investment.
- Bonds are affected by changes in interest rates, inflation and any decline in creditworthiness of the bond issuer. The fund's portfolio may have significant exposure to bonds that typically have lower ratings. Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may not be able to pay the bond income as promised or could fail to repay the capital amount used to purchase the bond. Where a bond market has a low number of buyers and/or a high number of sellers, it may be harder to sell particular bonds at an anticipated price and/or in a timely manner.
- Emerging markets or less developed countries may face more political, economic or structural challenges than developed countries. This may mean your money is at greater risk.
- The Fund can use derivatives in order to meet its investment objectives or to protect from price and currency movements. This may result in gains or losses that are greater than the original amount invested.
- Contingent convertible bonds can automatically convert into shares or be written down if the financial strength of the issuer falls in a certain way. This may result in substantial or total losses of the bond value.
- Investments in REITs and companies engaged in the business of real estate may be subject to increased liquidity risk and price volatility due to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.
- The Fund may invest directly or indirectly in Chinese domestic securities markets via various channels, including the Shanghai-Hong Kong Stock Connect programme in relation to which the Fund may suffer difficulties or delays in proving it owns the China shares or enforcing its rights given that the legal and regulatory rules in each of Shanghai and Hong Kong are very different. Use of these channels therefore bring additional risks as further described in the Fund's Prospectus under "Investing in China".
- The Fund may invest in companies through a domestic legal structure (i.e. Variable Interest Entity or "VIE"), in order to gain access to industries with foreign ownership restrictions. There is a risk that investments in these structures may be adversely affected by changes in the legal and regulatory framework.
