

Aberdeen Standard SICAV I - Euro Government Bond Fund

A Sinc EUR

Performance Data and Analytics to 30 June 2020

Summary investment objective

To achieve a combination of income and growth by investing mostly in bonds (which are like loans that can pay a fixed or variable interest rate) priced in Euro and issued by governments. The bonds will typically have higher ratings, as defined by international agencies that provide such ratings; these may pay lower rates of interest than bonds with lower ratings but are more secure. The Fund will maintain a Euro currency exposure of at least 80% at all times and may invest up to 10% in bonds with lower ratings.

For full investment objective and policy details refer to the Prospectus.

Cash includes cash at bank, outstanding settlements, call account cash, fixed deposits, cash used as margin and profit/losses on both derivative positions and forward currency contracts. Where bonds are split rated between two or more of S&P, Moody's and Fitch, the data shown takes a more conservative approach, splitting lower. This may not be consistent with the arrangement agreed in the prospectus, which may detail taking a higher rating where there is a split. In the absence of any agency ratings an internal Fund Manager rating may be applied. The benchmark shown reflects ratings from S&P, Moody's and Fitch only. This may differ from the ratings used by the benchmark provider. Figures may not always sum to 100 due to rounding.

³The Distribution Yield reflects the amounts that may be expected to be distributed (where a shareclass declares a distribution) over the next twelve months as a percentage of the mid-market share price of the fund as at the date shown. The Underlying Yield reflects the annualised income net of expenses and known irrecoverable withholding tax of the fund (calculated in accordance with relevant accounting standards) as a percentage of the mid-market share price of the fund as at the date shown. Both yields are based on a snapshot of the portfolio on the month-end date and are not guaranteed and actual distributions received (where a shareclass pays distribution) may be higher or lower than the amount stated. They do not include any initial charges and Investors may be subject to tax on distributions.

^cThe Ongoing Charge Figure (OCF), is the overall cost shown as a percentage of the value of the assets of the Funds. It is made up of the Annual Management Charge (AMC) of 0.60% and other charges. It does not include any initial charges or the cost of buying and selling stocks for the Funds. The Ongoing Charges figure can help you compare the annual operating expenses of different Funds.

Important information

Risk factors you should consider before investing:

- The value of shares and the income from them can go down as well as up and you may get back less than the amount invested.
- Investing globally can bring additional returns and diversify risk. However, currency exchange rate fluctuations may have a positive or negative impact on the value of your investment, particularly given the exposure to one currency in this fund.
- Bonds are affected by changes in interest rates, inflation and any decline in creditworthiness of the bond issuer. The fund's portfolio may have significant exposure to bonds that typically have lower ratings. Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may not be able to pay the bond income as promised or could fail to repay the capital amount used to purchase the bond. Where a bond market has a low number of buyers and/or a high number of sellers, it may be harder to sell particular bonds at an anticipated price and/or in a timely manner.
- The Fund can use derivatives in order to meet its investment objectives or to protect from price and currency movements. This may result in gains or losses that are greater than the original amount invested.
- Contingent convertible bonds can automatically convert into shares or be written down if the financial strength of the issuer falls in a certain way. This may result in substantial or total losses of the bond value.
- The Fund has a significant exposure to one currency, increasing its potential price volatility.
