

Aberdeen Standard SICAV I - Select Euro High Yield Bond Fund

A Acc Hedged USD

Performance Data and Analytics to 28 February 2019

Summary investment objective

To achieve a combination of income and growth by investing mostly in bonds (which are like loans that can pay a fixed or variable interest rate) priced in Euro and issued by companies or governments. The bonds will typically have lower ratings, as defined by international agencies that provide such ratings; these may pay higher rates of interest than bonds with higher ratings. The Fund is intended for investors who are willing to accept a high level of risk.

For full investment objective and policy details refer to the Prospectus.

Important information

Risk factors you should consider before investing:

- The value of shares and the income from them can go down as well as up and you may get back less than the amount invested.
- Investing globally can bring additional returns and diversify risk. However, currency exchange rate fluctuations may have a positive or negative impact on the value of your investment.
- Bonds are affected by changes in interest rates, inflation and any decline in creditworthiness of the bond issuer. Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may not be able to pay the bond income as promised or could fail to repay the capital amount used to purchase the bond. Where a bond market has a low number of buyers and/or a high number of sellers, it may be harder to sell particular bonds at an anticipated price and/or in a timely manner.
- Contingent convertible bonds can automatically convert into shares or be written down if the financial strength of the issuer falls in a certain way. This may result in substantial or total losses of the bond value.
- The Fund has a significant exposure to one currency, increasing its potential price volatility.
- Investors are reminded that there is no segregation of liability between Share Classes in the same Fund, so there is a remote risk that under certain circumstances, other Share Class holders of the same Fund will be exposed to liabilities arising from currency exposure transactions undertaken for a Base Currency Exposure Share Class which negatively impacts the Net Asset Value of these other Share Classes. Base Currency Exposure Share Classes contain additional risks which are set out in this Prospectus under the "General Risk Factors" heading.

[†]The Distribution Yield reflects the amounts that may be expected to be distributed (where a shareclass declares a distribution) over the next twelve months as a percentage of the mid-market share price of the fund as at the date shown. The Underlying Yield reflects the annualised income net of expenses and known irrecoverable withholding tax of the fund (calculated in accordance with relevant accounting standards) as a percentage of the mid-market share price of the fund as at the date shown. Both yields are based on a snapshot of the portfolio on the month-end date and are not guaranteed and actual distributions received (where a shareclass pays distribution) may be higher or lower than the amount stated. They do not include any initial charges and Investors may be subject to tax on distributions. As a function of meeting yield targets, high yielding funds will typically experience erosion of capital value. There can be no guarantee that target yields will be achieved.
