The comparator shown may be used for risk monitoring and portfolio construction purposes, as well as to provide a performance comparator; it is not an integral part of the Objective and Investment Policy for the fund and should not be considered as such.

The performance returns have been adjusted so that the proceeds of a class action received during the month of July 2012, relating to an investment held several years earlier, do not affect the performance for the month of July 2012 and the performance for all periods including the month of July 2012.

All return data includes investment management fees, performance fees, and operational charges and expenses, and assumes the reinvestment of all distributions. The returns provided do not reflect the initial sales charge and, if included, the performance shown would be lower.

Past performance is not a guide to future results.

Fund size	US\$ 142.7 m
Share Class	
Performance Launch Date	2 January 1996
Investment team	North American Equity

[^]The fund returns to the reporting date are based on dealing NAVs using a 13:00 CET valuation point: for US Equity Funds this means the dealing NAV uses security prices at close of the previous working day. The benchmark index, if unadjusted, would use the closing prices of the reporting date: when a US Equity benchmark is compared against a US equity fund this valuation point difference may produce a significant distortion in benchmark-relative performance. In order to neutralise this distortion, the benchmark returns shown are to the day previous to the reporting date.

Risk factors should be read in conjunction with all warnings and comments given in the prospectus for the fund. ASI believe that considering environmental, social and governance ("ESG") factors in our investment decisions leads to better outcomes for our clients, and so we consider ESG risks and opportunities in all of our investment decisions. Please note the risk analytics figures are calculated on gross returns whereas the performance figures are based on net asset value (NAV) returns. In addition, the risk analytics figures lag the performance figures by one month. It should be noted that the figures provided regarding risk would be adjusted if fund fees and expenses were included.

Standard deviation measures historical volatility. Beta is a measure of the volatility of a portfolio in comparison to a benchmark index. Sharpe ratio measures risk-adjusted performance. Tracking error measures the divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark. Information ratio is a ratio of portfolio returns above the returns of a benchmark to the volatility of those returns. R-squared is a statistical measurement that determines the proportion of a fund's return that can be explained by variations in the market, as measured by a benchmark index.

^bThe Ongoing Charge Figure (OCF), is the overall cost shown as a percentage of the value of the assets of the Funds. It is made up of the Annual Management Charge (AMC) of 1.50% and other charges. It does not include any initial charges or the cost of buying and selling stocks for the Funds. The Ongoing Charges figure can help you compare the annual operating expenses of different Funds.

Important information

Risk factors you should consider before investing:

- The value of shares and the income from them can go down as well as up and you may get back less than the amount invested.
- Investing globally can bring additional returns and diversify risk. However, currency exchange rate fluctuations may have a positive or negative impact on the value of your investment.
