

Aberdeen Standard SICAV I - GDP Weighted Global Government Bond Fund

A Acc USD

Performance Data and Analytics to 30 April 2019

Summary investment objective

To achieve a combination of income and growth by investing mainly in bonds (which are like loans that can pay a fixed or variable interest rate) issued by governments around the world. The bonds will typically have higher ratings, as defined by international agencies that provide such ratings; these may pay lower rates of interest than bonds with lower ratings but are more secure. Up to 20% of the Fund may be invested in bonds that typically have lower ratings, as defined by international agencies that provide such ratings; these may pay higher rates of interest than bonds with higher ratings. Less than 25% of the Fund may be invested in Mainland Chinese bonds listed or traded on the Chinese markets.

Cash includes cash at bank, outstanding settlements, call account cash, fixed deposits, cash used as margin and profit/losses on both derivative positions and forward currency contracts. Where bonds are split rated between two or more of S&P, Moody's and Fitch, the data shown takes a more conservative approach, splitting lower. This may not be consistent with the arrangement agreed in the prospectus, which may detail taking a higher rating where there is a split. In the absence of any agency ratings an internal Fund Manager rating may be applied. The benchmark shown reflects ratings from S&P, Moody's and Fitch only. This may differ from the ratings used by the benchmark provider. Figures may not always sum to 100 due to rounding.

Important information

Risk factors you should consider before investing:

- The value of shares and the income from them can go down as well as up and you may get back less than the amount invested.
- Investing globally can bring additional returns and diversify risk. However, currency exchange rate fluctuations may have a positive or negative impact on the value of your investment.
- Bonds are affected by changes in interest rates, inflation and any decline in creditworthiness of the bond issuer. Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may not be able to pay the bond income as promised or could fail to repay the capital amount used to purchase the bond. Where a bond market has a low number of buyers and/or a high number of sellers, it may be harder to sell particular bonds at an anticipated price and/or in a timely manner.
- The Fund can use derivatives in order to meet its investment objectives. This may result in gains or losses that are greater than the original amount invested.
- Emerging markets or less developed countries may face more political, economic or structural challenges than developed countries. This may mean your money is at greater risk.
- Performance may be strongly influenced by movements in currency rates. The value of your investment will either rise or fall in response to changes in foreign exchange rates between the base currency of the fund, and the currencies of the securities held by the fund.
- The Fund may invest directly or indirectly in Chinese domestic securities markets via various channels, including the China Interbank Bond Market (CIBM), which may carry greater risks and, as a result, may incur additional costs and suffer losses.
- The Fund may invest all its assets in the United States of America or any of its states, territories, possessions, or other areas subject to its jurisdiction or to or for the benefit of a United States Person. For the definition of United States Person, see the current Aberdeen Standard SICAV I prospectus.
