

abrdn Asia-Pacific Income Fund VCC

TSX: FAP

March 2022 Performance Data and Portfolio Composition

Objective

The Company's investment objective is to obtain current income. The Company may also achieve incidental capital appreciation.

Performance

The latest available performance figures have been calculated net-of-fees in U.S. dollars for the period:

Cumulative and annualised total return as of March 31, 2022 (%)

	1 month	3 months	Year to date	1 year	3 years (p.a.)	5 years (p.a.)	10 years (p.a.)	Since inception (p.a.)
NAV	-2.44	-7.23	-7.23	-7.76	-6.23	-3.99	2.08	798.46
Market Price	-7.49	-6.73	-6.73	1.59	-7.38	-4.52	-6.45	608.36

Past Performance is no guarantee of future results. Investment returns and principal value will fluctuate and shares, when sold, may be worth more or less than original cost. Current performance may be lower or higher than the performance quoted. NAV return data includes investment management fees, custodial charges and administrative fees (such as Director and legal fees) and assumes the reinvestment of all distributions. The Fund is subject to investment risk, including the possible loss of principal. Returns for periods less than one year are not annualized.

5-10 years	30.1
10+ years	18.8

**The average maturity of the portfolio was 4.4 years.

*Generally the credit ratings range from AAA (highest) to D (lowest). Where bonds held in the Company are rated by multiple rating agencies (Moody's, Fitch and S&P), the lower of the ratings is used. This may not be consistent with data from the benchmark provider. Quality distribution represents ratings of the underlying securities held within the Company, and not ratings of the Company itself. 48.4% of assets rated by multiple rating agencies to be BBB or better.

As of March 31, 2022 NAV (unaudited) and market price

Important risk disclosure

This factsheet is for informational purposes only and is not intended as a recommendation to buy or sell any security. Closed-end funds are traded on the secondary market through one of the stock exchanges. The Company's investment return and principal value will fluctuate so that an investor's shares may be worth more or less than the original cost. Shares of closed-end funds may trade above (a premium) or below (a discount) the net asset value (NAV) of the Company's portfolio. The Net Asset Value (NAV) is the value of an entity's assets less the value of its liabilities. The Market Price is the current price at which an asset can be bought or sold. There is no assurance that the Company will achieve its investment objective. Foreign securities are more volatile, harder to price and less liquid than U.S. securities. They are subject to different accounting and regulatory standards, and political and economic risks. These risks are enhanced in emerging markets countries. Fixed income securities are subject to certain risks including, but not limited to: interest rate (changes in interest rates may cause a decline in the market value of an investment), credit (changes in the financial condition of the issuer, borrower, counterparty, or underlying collateral), prepayment (debt issuers may repay or refinance their loans or obligations earlier than anticipated), and extension (principal repayments may not occur as quickly as anticipated, causing the expected maturity of a security to increase).
