

ASI MyFolio Index II Fund

(From 7 August 2019 the fund name was amended from SLI MyFolio Index II to ASI MyFolio Index II Fund)

Institutional B Fixed Accumulation GBP

29 February 2020

Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the MyFolio Index range, which offers five funds with different expected combinations of investment risk and return. The fund is risk level II, which aims to be the second lowest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 35-55% of world stock markets (represented by the MSCI World Index, over 10 years). There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Performance Comparator: For comparison purposes, investors can compare the funds long term performance to a basket of assets (before charges) with a risk profile at the lower range of the Risk Target stated above (i.e. 35% of world stock markets), which the ACD considers appropriate given the investment policy and Risk Target of the fund. This basket is composed 10% FTSE-All Share Index, 25% MSCI World ex UK Index and 65% SONIA Index. The ACD believes this is an appropriate Risk Target and Performance Comparator for the fund based on the investment policy of the fund and the constituents of the indices.

Portfolio securities

- The fund will invest at least 80% in passively managed funds, including those managed by Aberdeen Standard Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 20% in actively managed funds (including those managed by Aberdeen Standard Investments).
- Typically, at least 40% of the assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares).

Performance

Due to the share class having been launched within the past year and consequently having a performance track record of less than 12 months, the share class performance cannot currently be shown.

Risk and reward profile

This indicator reflects the volatility of the fund's share price over the last five years. See Key Investor Information Document (KIID) for details.

Key risks

- The value of investments and the income from them can fall and investors may get back less than the amount invested.
- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.

Management process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the funds objectives.
- The fund will not take any tactical asset allocation positions (changing short term proportions in each fund).
- Please note that the number contained in the fund name is not related to the SRRl contained in the Key Investor Information document (NURS-KII).
